No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 14,

Sequence 2, Application US/08769746

Patent No. 6274305

GENERAL INFORMATION

APPLICANT: Somenschein, Carlos

APPLICANT: Somenschein, Carlos

APPLICANT: Soco, Ana M.

TITLE OF INVENTION: Inhibiting Proliferation of Cancer Cells

NUMBER OF SEQUENCES: CORRESEE: Medlen & Carroll, LLP

STREET: California

COUNTRY: United States of America

ZIP: 94104

COMPUTER: EADABLE FORM:

MEDIUM TYPE: Floppy disk

COMPUTER: EADABLE FORM:

MEDIUM TYPE: Patentin Release #1.0, Version #1.30

CURRENT APPLICATION DATA:

APPLICATION NUMBER: US/08/769,746

CLASSIFICATION: 435-1996

CLASSIFICATION: 435-1996

CLASSIFICATION 19-DEC G.

REGISTRATION NUMBER: 32,837

REGISTRATION NUMBER: 32,837

REGISTRATION NUMBER: 32,837

TELECOMMUNICATION INFORMATION:

TELEPHONE: (415) 705-8410

TELECHOMIC CHARACTERISTICS:

LENGTH SEG : Mino acids

TELENGTH SEG : Mino acids

TELENGTH SEG : Mino acids
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ;

US-10-153-064-133
| Sequence 133, Application US/10153064
| Patent No. 6663485
| GENERAL INFORMATION:
| APPLICANT: Bell et al. |
| TITLE OF INVENTION: Chemokine Beta-1 Fusion Proteins File Reference: PF556
| CURRENT APPLICATION NUMBER: US/10/153,064
| CURRENT APPLICATION NUMBER: 60/293,212
| PRIOR PILING DATE: 2001-05-25
| NUMBER OF SEQ ID NOS: 137
| SEQ ID NO 133
| SEQ ID NO 133
LENGTH: 610 amino acids
TYPE: amino acid
TYPE: amino acid
TOPOLOGY: linear
MOLECULE TYPE: protein
SEQUENCE DESCRIPTION: SEQ ID NO: 2:
US-09-984-186-2
                                                                                                                                                                                                                                                                463 KHPEAKRMP 471

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Description

A, Note: albumin and other serum proteins are also found in bone
C; Comment: Serum albumin is synthesized in the liver as preproalbumin. It binds copper, teroid hormones (weak bonds with these hormones promote their transfer across the membracy Superfamily: serum albumin; serum albumin repeat homology
C; Keywords: carrier protein; duplication; metal binding; plasma

Antities Papid confirmation and revision of the primary structure of bovine serum albumant Ancessaion 134600 Accession 136000 Accession 136000
```

```
A. Accession: 80636
A. Molecule type: mRNA
C. Comment: Serum albumin is synthesized in the liver as preproalbumin. It binds copper,
C. Superfamily: serum albumin; serum albumin repeat homology
C. Keywords: carrier protein; duplication; metal binding; plasma
F. 19-24/Domain: serum albumin fatatus predicted A. MIO
F. 20-70/Product: serum albumin repeat homology A. SA1>
F. 20-201/Domain: serum albumin repeat homology A. SA3>
F. 21-201/Domain: serum albumin repeat homo
C;Keywords: carrier protein; copper binding; duplication; plasma
F;1-18/Domain: signal sequence #status experimental <SIG>
F;19-24/Domain: propeptide #status experimental <PRO>
F;29-201/Domain: propeptide #status experimental <MPT>
F;25-607/Product: serum albumin repeat homology <SA1>
F;20-393/Domain: serum albumin repeat homology <SA2>
F;412-591/Domain: serum albumin repeat homology <SA3>

"cDMA and protein sequence of polymorphic macaque albumins that differ

in bilitubin binding.";

proc. Natl. Acad. Sci. U.S.A. 90:2409-2413(1993).

I. Proc. Natl. Acad. Sci. U.S.A. 90:2409-2413(1993).

- !- FUNCTION: Serum albumin, the main protein of plasma, has a good

- i- FUNCTION: Serum and drugs. Its main function is the regulation of the colloidal osmotic pressure of blood.

- SUBCELLULAR LOCATION: Secreted.

- ITSSUE SPECIFICITY: Plasma.

- ITSSUE SPECIFICITY: Belongs to the ALB/APF/VDB family.

- ISIMILARITY: Contains 3 albumin domains.

"Sequence of the gene encoding cat (Felis domesticus) serum albumin.";
"Sequence of the gene encoding cat (Felis domesticus) serum albumin, the main protein of plasma, has a good binding capacity for water, Ca(2+), Na(+), K(+), fatty acids, hordmones, blirubin and drugs. Its main function is the regulation of the colloidal osmotic pressure of blood.
-!- SUBCELBULAR LOCATION: Secreted.
-!- ALIBERGEN: Causes an allergic reaction in human.
-!- ALIBERGEN: Causes an allergic reaction in human.
-!- SIMILARITY: Contains 3 albumin domains.

"Nuclectide Sequence of porcine liver albumin.";
Nucleic Acids Res. 16;9045-9045(1988).
-!- FUNCTION: Serum albumin, the main protein of plasma, has a good binding capacity for water. (a(2+1), Na++), K(+), fatty acids, binding capacity for water. (a(2+1), Na++), K(+), fatty acids, hormones, blintubin and drugs. Its main function is the regulation of the colloidal osmotic pressure of blood.
-!- SUBCELLUIAR LOCATION: Secreted.
-!- SIMILARITY: Delongs to the ALB/AFP/VDB family.
-!- SIMILARITY: Contains 3 albumin domains.

Brown J.R.;

"Structure of serum albumin: disulfide bridges.";

"Structure of serum albumin, the main protein of plasma, has a good pinding capacity for water, Ca(2+), Na(+), K(+), fatty acids, hormones, bilirubin and drugs. Its main function is the regulation of the colloidal osmotic pressure of blood.

-!- SUBCELLULAR LOCATION: Secreted.
-!- TISSUE SPECIFICITY: Plasma.
-!- ALLERGEN: Causes an allergic reaction in human.
-!- SIMILARITY: Belongs to the ALB/APP/VDB family.
-!- SIMILARITY: Contains 3 albumin domains.
                                                                                                                                             SEQUENCE, AND REVISIONS TO 118-119 AND 180.

Immediate electron acceptor for the enzyme in this species is

balieved to be ubiquinone. Couples the redox reaction to proton

translocation (for every two electrons transferred, four hydrogen

conserves the redox energy in a proton gradient (By similarity).

C. -: CORMANTIC ACTIVITY: NADH + quinone = NAD(+) + quinol.

(P., Anderson P.)

C. -: CORMANTIC ACTIVITY: NADH + quinone = NAD(+) + quinol.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This SWISS-PROT entry is copyright. NADH-quinone oxidoreductase chain 3 (BC 1.6.99.5) (NADH dehydrogenase I, chain G) (NDH-1, chain G).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (By similarity).
--- SUBURT: Composed of 13 different subunits. Subunits nuoCD, E, F, and G constitute the peripheral sector of the complex.
--- SIMILARITY: Belongs to the complex I 75 kDa subunit family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (BY SIMILARITY). The method of the invention has nephrotropic activity, and may have a use in gene therapy or antisense therapy. The method is useful for the screening, diagnosis or prognosis of KR in a subject, for determining the stage or severity of KR in a subject, for identifying a subject at risk of developing KR. Or for monitoring the effect of therapy administered to a subject with KR. An alternative method of the invention is useful for screening agents that interact with one or more of the kidney response-associated protein isoforms (KRPIs). The kidney response includes alterations in kidney function, any phase of nephron cell metabolic pathway modulation, glomerular/proximal tubular nephritis, glomerular/papillary necrosis, cutte and chronic renal failure, and end stage renal disease. The sequences shown in ABP66154-ABP61787 represent tryptic digest peptides of the KRPIs of the invention.
                                                                                                     ö
The relative abundance of the APs and APIs correlates with the of Alzheimer's Disease. The present sequence is a peptide from an API by proteolysis

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to methods for screening or diagnosing Alzheimer's disease (AD) to determine the stage or severity of AD in a subject, to identify subject at risk of developing AD, or to monitor the effect of therapy administered. The methods comprise analyzing a test sample of body fluid by 2-dimensional electrophoresis to generate a 2-dimensional array of AD-associated features (AFs). The method alternatively comprises quantitatively detecting in a sample of body fluid from the subject, one or more AD-associated APIs; (APIs)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        RB;

The present invention describes hybridoma cells used for preparing an immunoglobulin G (1gG) monoclonal antibody capable of rapid reaction with human albumin. The hybridoma cells are prepared by fusion of mammal myeloma cells and spleen cells immunised with human serum albumin, and producing 1gG monoclonal antibody which rapidly react with human albumin. The monoclonal antibodies can be used in the diagnosis of diabetic nephropathy. The present sequence repersents a human albumin epitope peptide sequence which is used in an example from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                Hybridoma cells for preparation of IgG monoclonal antibody capable of rapid reaction with human albumin for diagnosis of diabetic nephropathy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Processing of protein or peptide samples used in mass spectrometer

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         원
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes a method (M1) for screening or diagnosing a liver response in a subject, determining the stage or severity of a liver response in a subject, dentifying a subject at tisk of developing liver response, or monitoring the effect of therapy administered to a subject having liver response, involving detecting liver response.

CC associated protein isoforms (LRRIS) (see the peptides given in ABR75395 cortening or diagnosing a liver response in a subject, or monitoring the effect of a drug or therapy administered to a subject, involves consecutive nucleotides complementary to a nucleotide sequence encoding an LPRI with RNA obtained from a biological sample from the subject or with only oppide from the RNA, where the contacting occurs under conditions that permit hybridisation of the probe to the nucleotide sequence, and comparing the hybridisation, if any, between the probe and the nucleotide sequence, and comparing the hybridisation, if any, detected in the above step, with the hybridisation detected in a control sample, or with a previously determined reference range. MI is useful for screening or diagnosing a liver response in a subject, identifying a subject at risk of developing liver response in a subject, identifying a subject at risk of developing liver response and monitoring the effect of therapy administered to a subject having liver response
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

The present sequence is a peptide fragment of bovine serum albumin (BSA). The peptide was produced by chemical reduction of cysteine residues with dithiothreitol, alkylation with iodoacetamide and enzymatic digestion with trypsin. This is an example of the protein processing method of the invention, which was designed for use in proteomics analysis by mass spectrometry (MS). The general method involves: reversibly immobilising protein or peptide samples onto a solid support, e.g. a cation-exchange resin, subjecting the immobilised protein or peptide to solid phase-based chemical and/or enzymatic modifications; eluting the resulting peptide or peptides in near-quantitative yields in a format suitable for identification by routine MS technologies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human fetal liver.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foctal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; foetal liver; gene expression; single exon nucleic acid probe.
analysis, by reversibly immobilizing samples onto solid support, transforming to solid-phase chemical unit, eluting and recovering fragments from support.
                                                                                                                                                                                                                                                                                                                                                                                                          ..

gene expression in human placenta.
present sequence is a peptide encoded by a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to single exon nucleic acid probes (SENP: see AA131315-AA157546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders
                                                                                                                                                                                                                                                                                                                                         Peptide #8769 encoded by probe for measuring placental gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

```

expressed probe encoded protein SEQ ID NO: 34925.

```
Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human bone marrow.
                                                            Human; bone marrow expressed exon; gene expression analysis; probe; microarray; cancer; leukaemia; lymphoma; myeloma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Example 4; SEQ ID NO 34925; 658pp + Sequence Listing; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to single exon nucleic acid probes for measuring human gene expression in a sample derived from human heart (see ABA21355-ABA41305). The present sequence is a protein encoded by one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular system e.g. cardiovascular disease. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/published_pot_sequences
                                                                                                                                                                                                                        Protein #7067 encoded by probe for measuring heart cell gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Single exon nucleic acid probes for analyzing gene expression in human hearts.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  .

The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of such as lymphoma, lenkaemia and myeloma. The present sequence is a protein encoded by one of the probes of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; brain expressed exon; gene expression analysis; probe; microarray;

                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human genome-derived single exon nucleic acid probes useful for analyzing
                                                                                                                                                                     The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrania, epilepsy and cancers. The present sequence is a protein encoded by one of the probes of the invention
                                                                                                                          Single exon nucleic acid probes for analyzing gene expression in human
brains.

The invention relates to a single exon nucleic acid probe (SENP) (1) for measuring human gene expression in a sample derived from human adult liver, comprising one of 13109 defined nucleotide sequences given in the specification for complements fragments). The probe hybridises at high stringency to a nucleic acid molecule expressed in the human adult liver. (1) may be used for predicting, measuring and displaying gene expression in samples derived from human adult liver. The genes identified may be involved in genetic liver diseases such as cirrhosis.

Involved in genetic liver diseases such as cirrhosis.

Involved with coronary heart disease. ABG47348-ABG5930 represent human liver single exon encoded peptides of the invention. Note: The sequence but was obtained in electronic format directly from WIPO at the printed specification fitp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human peptide encoded by genome-derived single exon probe SEQ ID 34113
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9

                                                                                             The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from thuman lung comprising single exon nucleic acid probes having one of 12614 nucleic acid sequences mentioned in the specification, or their complements or the 1237 open reading frames derived from their 1261 probes. Also included are a microarray comprising the novel set of probes which publishes at high stringenty to a nucleic acid expressed in the human lung; measuring gene expression in a sample derived from human lung, comprising (a) contacting the array with a call expressed in the human lung; measuring gene expression in a sample derived from human lung measuring (a) contacting the array with a call expressed in the human lung measuring (a) comprising (a) detectably labeled nucleic acids derived from human lung mRNA, and (b) measuring the label detectably bound to each probe of the array identifying exons in a evaryatic genome, comprising (a) algorithmically predicting at least one exon from genomic sequences of the eukaryore; and (b) detecting specific thy byridiatation of detectably labeled nucleic acids from entioned microarray, assigning exons to a single exon probe, having a fragment identical to the predicted exon probe in the above mentioned microarray; assigning exons to a single exon microarrays having a probe with the exon, where a common pattern of the exons should be assigned to a single gene, a peptide comprising one probes/open reading frames (o) (RF). The probes are used for gene expression of the exons in a gene, a perficularly using human lung derived mRNA and for the study of lung diseases such as asthma, lung cancer, chronic obstructive pulmonary disease (IDD), interstitial lung disease (IDD), familial idiopathic pulmonary disease (IDD), interstitial lung cancer, chronic, surfaced pulmonary disease (IDD), interstitial lung probes are used for demined a disease, pulmonary disease (IDD), interstitial with pulmonary publication, but was obtained in e
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ô

The present invention relates to human single exon nucleic acid probes (SENP: see AAI10068-AAI28459). The present sequence is a peptide encoded by one such probe. The SENPs are derived from human Heids cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human cervical epithelial cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

XX Human genome-derived single exon nucleic acid probes useful for analyzing proceed expression in human fetal liver.

XX Claim 27; SEQ ID NO 30524; 639pp + Sequence Listing; English.

XX CC The invention relates to a single exon nucleic acid probe for measuring considered exon nucleic acid probes may be used for predicting, measuring and claplaying gene expression in a sample derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe construction note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format construct in the printed specification, but was obtained in electronic format XX Sequence 85 AA;
